

### Small But Mighty

Green Machine® Mini/Medium-Sized Polisher Screens offer the same attributes as our favored large polisher screens. When footprint and low ceiling heights are a concern, our cost effective screens will meet your space constraints and provide the power for the job.

### Meet Your Throughput Requirements

Our smaller polishers separate the balance of fibers and containers before downstream container processing and are even used as primary separation screens for recyclers running 12 THP or less. Our mini/medium-sized polishers have two zones with fully adjustable speeds and angle giving you control over throughput and contamination levels of both fibers and containers.

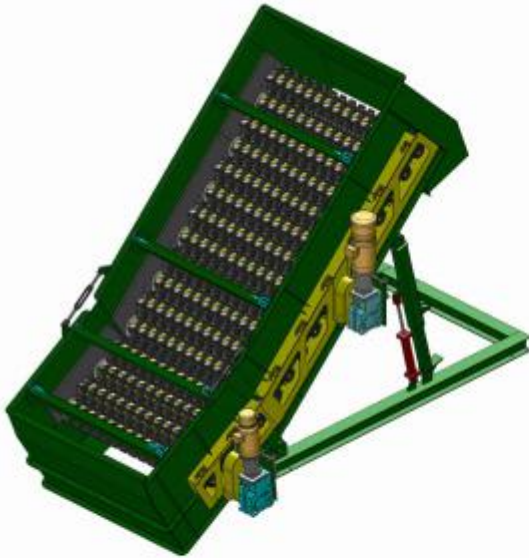

### Patented Wrap Resistant Spacers

Similar to the large polisher screening systems, our smaller screens are built with our patented wrap resistant spacers that keep your screens clean and running efficiently. Also, our discs and spacers can be adjusted/replaced without removing any shafts, saving you even more productive time. Combined with the lowest rubber disc wear per ton processing cost, our screens save you money on replacement parts and prevent downtime.
